5. The airfield located south of MIS. was used by conserved aircraft, even at night. The field was also occupied by a fighter unit practicing fermation flying in formations of up to five in addition to night flying, which was done in consection with ascarchii ht practice. The landing year of the aircraft retracted inward, their wings were set at about the middle of the fuselage and were shaped as shown below:

Form f wings:

- 6.c There was a connercial field south of the MASK freight station. A hangar (500 x 200 x 25 feet) was under construction on the northern side of the field. A taxiway extended from the hangar to the west. A concrete aircraft dispersal area was west of the field.
 - A new settlement comprised of 12 finished houses, which was lein expanded, was on the northern border of the field.
- 8. The field was occupied by about 10 twin-engine commercial aircraft and 10 to 12 biplanes.
- 9. The commercial airfield south of MINSK and about 3/5 mile east of the railroad line to PREST had a concrete E-V runway about 6,600 feet long and 165 feet wide. A hangar, allogedly dismantled in BENLIN-TE PEEHOE, was under construction in April 1869.
- 10. Plying activities varied, but generally there was little. Only twin-engine conserval aircraft were observed.
- 11. The field south of the railroad station of HINSK had about a . 6,000-foot runway, boundary lighting facilities, buildings and a radio station.
- 12. Four searchlights of about 60-inch diameter and nine 37-wm AA runs resembling the German 37-wm AA guns were observed emplaced on the border of the field.
- 13. The following installations were seen along the railroad line to the west:
 - a. Two searchlight stations with large searchlights. The two searchlight stations were about four miles west of the town perimeter, about 3,000 fect north of the railress line.
 - b. for to fifteen individual 37-mm AA tuns installed in wooden towers as far as 13 miles west of PASK. A temporary emplacement of four 76.2-mm AA tuns (a battery) was observed about 2½ wiles west of the main railroad station, about 1,000 feet north of the railroad line. The guns were mounted on four-wheeled rubber-tired gun carriers (two loads). The pertinent tractors (three-axle trucks) were parked about 650 feet from the runs.
